Did you know?

Why do astronauts grow taller in space?

Because the lack of gravity removes the constant compression on their spine, allowing the vertebrae to expand.

Why do land ice and sea ice affect climate differently?

Land ice adds to sea level when it melts, while sea ice mainly floats and acts as a reflective insulating barrier.

August 2026

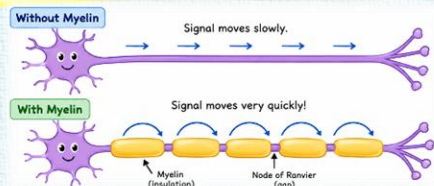

“Social Wellness : Kindness and teamwork nurture wellness and inspire excellence in our school community.”

Did you know?

Why do volcanoes erupt explosively sometimes?

Magma contains high amounts of dissolved gases and is very viscous. As a result, pressure builds up inside the volcano. When released, it causes a sudden and powerful explosive eruption.

Why are fossils usually found in sedimentary rocks?

Sediments can bury plants and animals gently, helping their shapes get preserved.

October 2026

“Spiritual Wellness : Good values and gratitude nurture inner peace and inspire excellence in character.”
